

POMERENE NOT TO GET LABOR VOTE

Ohio Senator Wins the Disapproval of Trade Unionists

FESS IS ALSO N. G.

Union Officials Say That the Election of Either Is a National Calamity

CLEVELAND, Aug. 5.—Labor, restrictive and union, and the woman vote, an unknown strength, were outstanding features today as voters of both parties prepared to nominate candidates for United States senator and governor in the state-wide primaries in President Harding's home state Tuesday.

The attitude of these two elements, it is conceded, will largely determine the election.

Appeals to union labor to defeat Senator Pomerene and Congressman Fess were mailed out from headquarters of the "big four" railroad brotherhoods here today. Support was asked for John L. Lewis, as against Pomerene and Former Senator Dick, as against Fess.

The election of Fess would be little more of a calamity than the choice of Pomerene, it was declared.

The makeup of the tickets, but thus far there has been no indication they will vote as a unit for any candidate. An immense field entered for the republican nomination for governor for which there are nine candidates, and divisions among other lines, has prevented a unification of this vote, although the union labor vote in the contests for the senatorship will be cast against Senator Alton Pomerene and Congressman Simeon D. Fess, political observers say.

It is not believed, however, labor can defeat either veteran legislator, and all prospects unite in predicting their nomination.

As to the governorship, however, it is claimed the effect of the twin railroad and coal strikes has been to align the labor element pretty strongly against Col. Carl A. Thompson, with every other active candidate falling heir to some of this business man's making his campaign on support of the administration of President Harding and a promise to use business methods in conducting the affairs of state.

THIRD TICKET NOW DUE

Texas Voters May Discard Both Klan and Anti-Klan Candidates at Next Primary

SAN ANTONIO, Texas, Aug. 5.—Apparent dissatisfaction with both candidates in the United States senatorial run-off may result in the introduction of a third name, if a suggestion made by a member of the state democratic executive committee carried, although the instant run-off of the movement is withheld. Effort is being made now to have the suggestion accepted over the state. The question will probably come before the executive committee at Dallas Monday.

Climber Will Try to Ascend Mount Moran

YELLOWSTONE PARK, Wyo., Aug. 5.—Leroy Jeffers, secretary of the Associated Mountaineering club of North America, left here today for a point just south of Yellowstone Park from which he will attempt to ascend the west peak of Mount Moran, one of the unscalped pinnacles of the famous Teton mountain range. Moran is 12,100 feet high.

Protest Nomination Of Woman for Clerk

By the Associated Press State Wire. OKMULGEE, Aug. 5.—A protest was filed with the county election board today against the issuance of a certificate of nomination for Eva Russell as court clerk on the ground that she did not sign her candidacy when it was filed a few months before the time limit expired June 1. Miss Russell on the face of official returns was nominated over William P. Bell, now serving his third term as clerk, in last Tuesday's primaries.

BECOMES A GUERRILLA

Eamon de Valera, Determined to Keep on Fighting England for Irish Freedom.

DUBLIN, Aug. 5.—Eamon de Valera is preparing to flee into the Irish mountains to assume the life of a guerrilla chief, according to reports reaching here from the "front."

De Valera is said to be seen daily on the border of Limerick and Tipperary counties, with a rifle slung over his shoulder, leading his forces. His soldiers are said to be mainly school boys.

Practical Housekeeping

By FLORENCE AUSTIN CHASE.

Council Table.

Q. Should the olive, celery, radishes, pickles or jelly be on the table from the beginning to the end of the meal?

A. Yes. They should be on the table from the beginning of the meal.

Q. Is a side table necessary to current table service?

A. When there is no maid to wait at table, the side table is indispensable to the housewife who would have her table immediately cleared and have the dinner pass off without confusion. The most convenient side table is one having large casters which render them easy to push about, or better yet, the convenient iron wagon.

Q. Would it be correct to place first course upon the table before meal is announced, then placing the meat, vegetables and salad courses on the side table?

A. Yes, such procedure is correct and makes for easy service without a maid.

Q. In laying table linens I use linen starch, is that correct?

A. If the linen is not very fine, have it ironed very wet, with a heavy, hot iron and perfectly dry. Thin starch may be used for the cloth but I would not use it for the napkins.

Q. Is it considered good taste to have a growing plant on the table as a centerpiece?

A. A growing plant is always in good taste, and the pot may be covered with green crepe paper. I like a bit of living color on the table.

whenever it is possible to have it; even a single blossom is often all that is needed to give desired note of color.

Q. What is the regulation size of dinner and luncheon napkins?

A. The dinner napkin is 24 inches square and the luncheon napkin 18 inches square. The edges of dinner napkins have rolled hems and the luncheon napkins have hem-stitched or scalloped edges, making them easily laundered.

Q. When laying the table, should butter spreader be placed on the bread and butter plate or on the right with other knives?

A. The butter spreader is usually placed on the edge of the bread and butter plate a little to the right.

Q. Where there is no maid, does the host serve vegetables at time of serving meat or fish?

A. Where there is no maid, the host serves the meat or fish, and the hostess serves the soup, salad, dessert and coffee; the host the meat or fish, and the hostess serves the plates as the food is served, and also the vegetables and entrees.

Q. Is the salad placed at the left or right of plates?

A. While there has been a good deal of discussion as to which is the proper place for the salad, it has not changed its location. It should be placed at the left.

Q. Are solid plates removed at the left? Are the large dishes and platters removed before the solid plates?

A. In removing a course, take the large dishes and platters first. Always remove solid plates at the left, using left hand, before serving the desert, brush off all crumbs, then bring on coffee and dessert.

Q. If a very simple meal is desired, two courses for instance, what would you suggest that it consist of?

A. If only a very simple meal is desired, have a meat or fish dish with two vegetables and select a somewhat rich dessert.

RADICAL FORCES AT EACH OTHER

Thirty Die and More Than 100 Are Wounded in Fighting

ROME, Aug. 5.—Thirty persons have been killed and more than a hundred wounded in terrific fighting between Fascist and socialist-communist forces in northern Italy, according to advices received this afternoon from various cities. The death list earlier in the day had been put at only 10.

The socialist-communist forces have been defeated practically everywhere.

LONDON, Aug. 5.—Twenty thousand Fascist troops occupied the city of Parma, seizing the executive machinery, according to a Central News dispatch from Rome this afternoon.

The socialists and communists have been expelled from Sampierdarena.

Violent fighting is raging in northern Italy, particularly in the regions of Milan and Genoa, according to the Central News. Both sides are using machine guns. The gendarmerie is practically helpless.

DID NOT REPORT WORK

Two Firms Neglected to Report on Their Drilling Operations.

By the Associated Press State Wire. OKLAHOMA CITY, Aug. 5.—The alleged failure of oil companies to file with the corporation commission reports covering drilling and operation of wells led to the filing today of citations by the commission against two companies. J. J. Deane, of Okmulgee, and the Garco Oil company of Enid were cited to appear for failure to report on a well in Okmulgee county and J. O. Galloxy of Oklahoma City was cited for failure to file covering wells in Adair county. Both citations are returnable August 25.

Married Couple Robbed. KANSAS CITY, Aug. 5.—While enjoying in the Paseo early today Mr. and Mrs. Frank Garwood were held up and robbed by motor bandits of diamonds and cash amounting to \$3,500.

Noted Burglar Escapes. BERLIN, Aug. 5.—Walter Opitz, a notorious burglar, escaped from a prison cell here today garbed as a priest. Prison officials had taken all his clothes away from him when he boasted that he would escape. He did.

A thick solution of unvulcanized rubber in carbon bisulphide has been found valuable for removing grease stains from leather articles, the grease peeling off with the rubber when the solvent evaporates.

Fifteen Minutes of Radio Each Day

By EDWARD N. DAVIS

Formerly Technical Electrical Expert for U. S. Government. (Copyright 1922, by United Feature Syndicate)

LESSON NO. 119. Resistance.

(All rights reserved by United Feature Syndicate. Reproduction prohibited.)

Resistance is the opposition to the flow in such devices as electric irons, electric circuit breakers, Resistance is the factor which limits the current flow in such devices as electric irons, soldering irons, audio tube filaments, electric lights and thousands of other kinds of electrical devices and instruments.

While the resistance of a substance is generally assumed to be a more or less fixed quantity dependent upon its peculiar electrical characteristics, materials which undergo a wide change in temperature sometimes change in resistance. For example, the resistance of a pair of telephones for radio work is usually around 2,000 ohms and is not variable, or rather does not change since there is no great change in temperature of the windings. An electric light bulb filament or an audio filament varies greatly in resistance according to the current flowing through it.

There are in general two kinds of electric light filaments, metal and carbon. It is found that the carbon filament lamps draw more current when hot than while cold, while the metal filament lamps made of tungsten or tantalum draw more current when cold than when hot.

This property of some metals of changing resistance with changes in temperature due to changes in current may be expressed another way. If the voltage across such a filament is raised the current flow may be the same due to an increase in resistance caused by a higher temperature of the filament. This property usually holds over a very limited range as the filament will melt if the temperature is increased beyond a certain point.

This property described in the foregoing paragraph is applied to ballast lamps which are used for keeping the current constant in a circuit although the voltage varies within certain limits. Such a resistance as this does not obey Ohm's law which states that if the voltage across the circuit is increased, the current will likewise be increased, but this law assumes that the resistance is fixed while in the case of ballast lamps the resistance increases with increases in temperature.

Certain receiving sets employ vacuum tubes for detectors and amplifiers with ballast lamps instead of rheostats to keep the filament current constant. Recently observed tests on ballast lamps produced a current flow of 4 amperes from a storage battery with voltage varying from two to six volts.

Resistance is the only opposition offered to the flow of current in a direct current with the exception of circuits containing motors or similar devices where the current is limited by the generator effect produced in the rotating armature. In alternating current circuits, however, not only the ohmic resistance of the circuit (sometimes called the D. C. resistance) but also the reactance due to inductance and capacitance affect the current flow. The total opposition to the current flow is also measured in ohms but is called the impedance. For example, radio receivers on telephones are often marked "D. C. 2,000 ohms" and "A. C. 24,000 ohms"; the A. C. resistance being measured at the usual audible frequencies used in radio work.

Fenduits Get Victim. CHICAGO, Aug. 5.—A feud to the death, inaugurated several weeks ago against John Patti by unknown men, ended today in Patti's murder. Two of the feudists sent four bullets into his heart and head while Patti sat smoking a pipe in front of his barber shop. The men escaped.

WALTON WON'T ALTER PROGRAM

Democratic Candidate to Run on Original Farm-Labor Plank

By the International News Service.

OKLAHOMA CITY, Aug. 5.—Despite charges that its principles are socialistic, Mayor J. C. Walton of this city, democratic nominee for governor, will run on the platform embracing a state bank, soldier bonus, state-owned mills and elevators, and farm and home ownership laws, close friends of Walton said today.

A fight is being waged over the calling of a state democratic convention.

Political enemies of Walton are anxious for the convention, while Walton as well as all other farmer-labor candidates are opposed to it.

Excavate for Warehouse. New Wholesale Grocery Firm Expects to Be Operating Soon. Excavation was begun recently at the First and Franklin street on the site of the proposed warehouse of the Collins-Balta-Morris Wholesale Grocery company whose advent will constitute the most recent addition to Tulsa's wholesale market.

R. M. Black, who is in charge of the construction expects to have the building completed within six weeks when the firm will open for business here.

FORD COMPANY FACES CRISIS

Must Have More Fuel in Two Weeks or Shut Down Vast Plants.

LANSING, Mich., Aug. 5.—The entire army of Ford Motor company employees will be thrown out of work unless Ford obtains new coal shipments within 14 days, his representatives told the fuel committee here in addition to the Ford plant with its vast number of workers the Dodge, Chevrolet and Studebaker plants would be tied up through loss of their gas, which Ford supplies.
